Education

B.E. Electrical and Electronics Engineering

KPR Institute of Engineering and Technology, Coimbatore

CGPA : 7.5 2022 – 2025

Diploma in Electrical Engineering

Thiagarajar Polytechnic College, Salem

Percent with : 89% 2019 – 2022

TECHNICAL SKILLS

Web Technologies

HTML, CSS, Bootstrap, JavaScript, React, JSX

Engineering Tools

ETAP (Load Flow Analysis), MATLAB (Simulink Basics), PVSYST

Other Skills

UI/UX Design, Responsive Design, Problem Solving, Team Collaboration

Productivity Tools

Microsoft Excel, Microsoft Word, PowerPoint

About Me

Electrical and Electronics Engineering graduate with UI design experience and strong problem-solving skills. Eager to build a career in the electrical engineering domain as a Junior Engineer and contribute through practical learning and execution.

WORK EXPERIENCE

UI/UX Designer / 1 Year

- Designed and developed responsive web interfaces using React, JavaScript, and Bootstrap
- Improved user experience by creating intuitive and visually appealing UI designs
- Collaborated with developers and cross-functional teams to deliver functional solutions
- Ensured consistency and performance across multiple devices and platforms

INTERNSHIPS

Power Projects – Internship Trainee (Dec 2023 – Jan 2024)

Performed load flow analysis using ETAP to evaluate power system performance under varying conditions. Analyzed voltage profiles, current distribution, and system stability in simulated environments. Gained practical exposure to power system modeling and real-time electrical network behavior.

Salem Steel Plant – Industrial Internship (1 Week)

Completed a comprehensive industrial visit covering all major sectors of the steel plant. Acquired practical knowledge of large-scale industrial operations, electrical systems, and manufacturing processes.

Nxtgen Instruments (IoT) – Internship (June 2023 – July 2023)

Learned fundamentals of Internet of Things (IoT) including sensors, data communication, and basic system integration. Gained exposure to real-time applications of IoT in engineering solutions.

PROJECTS

Design and Simulation of Integrated System Behavior using ETAP

- Simulated dynamic load variations to analyze system stability and performance
- Evaluated voltage, current, and power flow under real-time conditions
- Gained hands-on experience in electrical system modeling and analysis

Parallel Transformer Simulation using ETAP

- Designed a system with 3 transformers, grid, and bus connections
- Analyzed load sharing and system efficiency

Solar Roof System Concept (Green Slate Roof Car)

- Studied solar panel integration on alternative surfaces
- Evaluated cost vs energy efficiency for sustainable solutions
